PORTFOLIO / 2026

Andrei Tomashevskii

UI/UX & VISUAL DESIGNER

I design clear digital products and visual systems—from information architecture and user flows to interfaces, prototypes and presentations.

PROFILE

Product design · UI/UX · Branding

REMOTE / WORLDWIDE

01 / PROFILE

Design that helps people move forward

UI/UX and visual designer with 4+ years of experience across web and mobile products, branding and digital communication. I combine user flows, thoughtful visual systems and practical handoff to development. My focus is on clear interfaces, cohesive experiences and predictable journeys.

What I do

Research & structure

Problem framing, user flows, information architecture and wireframes.

Interfaces & prototypes

Web and mobile UI, interactive prototypes, interface states and responsive solutions.

Visual systems

Brand identity, graphics, design systems and consistent digital touchpoints.

Design handoff

Production-ready files and specs; collaboration with developers and feedback loops.

Tools

Figma · Webflow · Adobe Photoshop · Adobe Illustrator · Canva

Education

Bachelor of Design, Communication Design
Design University

Work profile

UI/UX Designer · Product Designer · Visual Designer. Open to remote collaboration with teams worldwide. Native Russian.

02 / CASE STUDY 01

FPV drone & VR headset

A product concept for an immersive first-person flight experience. The project brings the physical device, its controls and the digital experience together as one product story.

The challenge

Show how a remotely controlled drone and VR headset can form a coherent user experience, from pre-flight setup to control and a sense of presence. The concept needed to communicate technology, performance and intuitive interaction.

Design approach

- Set a visual direction focused on precision, control and a high-tech character.
- Connected the key parts of the concept: camera drone, VR headset and screen-equipped controller.
- Built a presentation narrative around the product, its use context and its key benefits.
- Prepared a set of screens and visual materials to communicate the concept.

Outcome

A cohesive product concept in which the hardware, control system and immersive-flight idea read as one experience. The proposal sets a direction for further prototyping and scenario validation.

ROLE	FOCUS	DELIVERABLES
Product / UI Designer	Product concept · User experience	Concept design · Visual presentation

Design principles

Intuitive control · technology-led presentation · sense of presence · room to evolve

03 / CASE STUDY 02

RanRanFood — food delivery

A mobile app concept that helps people choose a meal, customize an order and understand what happens next.

The challenge

Bring restaurant and dish discovery, menu browsing, delivery selection and checkout into one interface. Keep each step clear even when the catalog includes many categories and choices.

Core user journey

- The home screen starts with search, popular dishes and current offers.
- Categories and menu cards help people compare dishes and open details quickly.
- A guided checkout explains delivery, address and payment choices.
- The cart and confirmation step show the order and total before completion.

Interface decisions

A consistent bottom navigation, a clear separation between browsing and checkout, and high-contrast actions support the key steps. Dish cards and compact categories make the menu easier to scan.

Outcome

A mobile-first service concept covering the full journey from meal discovery to checkout. The scope includes home, menu, restaurant, cart and checkout screens, forming a basis for an interactive prototype and usability review.

ROLE	SCOPE	PLATFORM
UI/UX Designer	Information architecture · UI · Prototype	Mobile app

Principles

Fast discovery · clear checkout · small-screen usability · consistent navigation

04 / CASE STUDY 03

Ryzen — visual identity

A logo and visual-presentation concept for a technology brand associated with performance, speed and innovation.

The challenge

Create a strong, memorable identity that works across digital and print. The mark needed to be recognizable, supported by clear typography and convey power without visual clutter.

Design direction

- Built the visual idea around a compact mark and a distinctive wordmark.
- Used a bold form and dynamic accent to suggest energy and motion.
- Considered how the identity could work on different backgrounds and presentation materials.
- Kept the design concise so the mark remains recognizable at different sizes.

Outcome

A brand identity direction with a logo, presentation variations and application principles. The concept is designed for digital and print use and can grow into a broader brand system.

ROLE	FOCUS	APPLICATION
Brand / Logo Designer	Brand identity · Logo system	Digital · Print · Presentation

Principles

Minimalism · recognition · scalability · technology-led character

05 / APPROACH

From the problem to a clear solution

I work across user experience, visual design and practical implementation. I keep the product goal in focus and help teams move from an idea to an interface that can be tested.

How I work

01 Understand

Clarify goals, audience, constraints and measures of success.

02 Structure

Define user flows and information architecture before detailed visual design.

03 Design

Create wireframes, interface states and a prototype of the key journey.

04 Validate & hand off

Gather feedback, refine the solution and prepare files for implementation.

Strengths

Attention to detail · fast iteration · problem solving · openness to feedback · reliable communication · deadline ownership

Core capabilities

UI/UX design · Web design · Mobile app design · Wireframing · Prototyping · Design systems · User research · Responsive design · Visual identity · Branding · Graphic design
